JOURNAL OF POWER SOURCES

Subject Index of Volume 64

Acid concentration
  a predictive model of the reliabilities and the distributions of the acid concentrations, open-circuit voltages and capacities of valve-regulated lead/acid batteries during storage, 139
Active material utilization
  positive plate additives, 47
Additives
  positive plate additives, 47
Ageing
  modelling of local conditions in flooded lead/acid batteries in photovoltaic systems, 181
Alloys
  effect of polarisation mode, time and potential on the properties of the passive layer on lead–tin alloys, 21
  analysis of tin in lead oxide by Mössbauer spectrometry and transmission electron microscopy, 35

Basic lead sulfate
  soaking and formation of tetrabasic lead sulfate, 71
Battery dynamic performance
  nonstationary analysis and modelling of battery load performance, 189
Battery modelling
  nonstationary analysis and modelling of battery load performance, 189

Calcium
  analysis of tin in lead oxide by Mössbauer spectrometry and transmission electron microscopy, 35
Calcium sulfate
  influence of cycling on the nature of the positive active mass of lead/acid batteries and effect of $CaSO_4$ on the behaviour of the positive plates, 51
Capacity
  a predictive model of the reliabilities and the distributions of the acid concentrations, open-circuit voltages and capacities of valve-regulated lead/acid batteries during storage, 139
Carbon
  effects of carbon in negative plates on cycle-life performance of valve-regulated lead/acid batteries, 147
Cast-on-strap process
  simulation of the cast-on-strap process in a finite-element model, 97
Charge
  rapid partial charging of lead/acid batteries, 103
Closed oxygen cycle
  energy balance of the closed oxygen cycle and processes causing thermal runaway in valve-regulated lead/acid batteries, 131
Cobalt
  effects of cobalt in lead/acid batteries, 91
Current distribution
  modelling of local conditions in flooded lead/acid batteries in photovoltaic systems, 181
Cycle performance
  effects of carbon in negative plates on cycle-life performance of valve-regulated lead/acid batteries, 147
Cycling
  influence of cycling on the nature of the positive active mass of lead/acid batteries and effect of $CaSO_4$ on the behaviour of the positive plates, 51
Cycling tests
  structural and morphological study of damage in lead/acid batteries during cycling and floating tests, 117

D-cell
  an account of the development of the first valve-regulated lead/acid cell, 153
Dissolution/precipitation mechanism
  the kinetic mechanism of the PbO_2 discharge of the lead/acid positive plates, 111

Electricity generation
  the lead/acid battery — a key technology for global energy management, 157
Electric vehicles
  the lead/acid battery — a key technology for global energy management, 157
  electrochemical modelling of lead/acid batteries under operating conditions of electric vehicles, 175
Electrodes
  electrochemical behavior of lead dioxide deposited on reticulated vitreous carbon (RVC), 29
  electrochemical modelling of lead/acid batteries under operating conditions of electric vehicles, 175
Electrolytes
  rapid partial charging of lead/acid batteries, 103
Energy balance
  energy balance of the closed oxygen cycle and processes causing thermal runaway in valve-regulated lead/acid batteries, 131
Energy demand/supply
  the lead/acid battery — a key technology for global energy management, 157
Environmental problems
  the lead/acid battery — a key technology for global energy management, 157

Finite-element analysis
  simulation of the cast-on-strap process in a finite-element model, 97
Floating tests
  structural and morphological study of damage in lead/acid batteries during cycling and floating tests, 117
Formation
  improvement of the formation efficiency of the tetrabasic lead sulfate for lead/acid batteries, 81

Growth mechanisms
  reaction model development for the $Pb/PbSO_4$ system, 39

Elsevier Science S.A.

Heating
rapid partial charging of lead/acid batteries, 103
Hydration water
role of hydration water in the reduction process of PbO_2 in lead/acid cells, 57
Hydrogen evolution
industrial batteries in the electric power system of 'Electricité de France', 203

Impedance spectroscopy
influence of antimony on the properties of the anodic oxide layer formed on Pb–Sb alloys, 13
Industrial batteries
industrial batteries in the electric power system of 'Electricité de France', 203
Internal resistance
monitoring the battery status for photovoltaic systems, 193

Lead
influence of antimony on the properties of the anodic oxide layer formed on Pb–Sb alloys, 13
effect of polarisation mode, time and potential on the properties of the passive layer on lead–tin alloys, 21
electrochemical behavior of lead dioxide deposited on reticulated vitreous carbon (RVC), 29
analysis of tin in lead oxide by Mössbauer spectrometry and transmission electron microscopy, 35
Lead/acid batteries
influence of antimony on the properties of the anodic oxide layer formed on Pb–Sb alloys, 13
analysis of tin in lead oxide by Mössbauer spectrometry and transmission electron microscopy, 35
positive plate additives, 47
influence of cycling on the nature of the positive active mass of lead/acid batteries and effect of $CaSO_4$ on the behaviour of the positive plates, 51
role of hydration water in the reduction process of PbO_2 in lead/acid cells, 57
a study of the passivation mechanism of negative plates in lead/acid batteries, 65
soaking and formation of tetrabasic lead sulfate, 71
improvement of the formation efficiency of the tetrabasic lead sulfate for lead/acid batteries, 81
effects of cobalt in lead/acid batteries, 91
simulation of the cast-on-strap process in a finite-element model, 97
rapid partial charging of lead/acid batteries, 103
the kinetic mechanism of the PbO_2 discharge of the lead/acid positive plates, 111
structural and morphological study of damage in lead/acid batteries during cycling and floating tests, 117
study of resistance changes related to premature capacity loss in lead battery plates, 123
energy balance of the closed oxygen cycle and processes causing thermal runaway in valve-regulated lead/acid batteries, 131
a predictive model of the reliabilities and the distributions of the acid concentrations, open-circuit voltages and capacities of valve-regulated lead/acid batteries during storage, 139
effects of carbon in negative plates on cycle-life performance of valve-regulated lead/acid batteries, 147
an account of the development of the first valve-regulated lead/acid cell, 153
the lead/acid battery — a key technology for global energy management, 157
electrochemical modelling of lead/acid batteries under operating conditions of electric vehicles, 175
modelling of local conditions in flooded lead/acid batteries in photovoltaic systems, 181
monitoring the battery status for photovoltaic systems, 193
analysis of the performance parameters of lead/acid batteries in photovoltaic systems, 197
industrial batteries in the electric power system of 'Electricité de France', 203
Lead/acid system
reaction model development for the $Pb/PbSO_4$ system, 39
Lead–antimony alloys
influence of antimony on the properties of the anodic oxide layer formed on Pb–Sb alloys, 13
Lead dioxide
electrochemical behavior of lead dioxide deposited on reticulated vitreous carbon (RVC), 29
dependence of the electric field on the specific surface conductivity of PbO_2, $3PbO \cdot PbSO_4$ and $4PbO \cdot PbSO_4$, 61
role of hydration water in the reduction process of PbO_2 in lead/acid cells, 57
Lead electrooxidation
reaction model development for the $Pb/PbSO_4$ system, 39
Lead monooxide electroreduction
reaction model development for the $Pb/PbSO_4$ system, 39
Lead sulfate
dependence of the electric field on the specific surface conductivity of PbO_2, $3PbO \cdot PbSO_4$ and $4PbO \cdot PbSO_4$, 61
Lead sulfate electroreduction
reaction model development for the $Pb/PbSO_4$ system, 39
Lead sulfate reduction
a study of the passivation mechanism of negative plates in lead/acid batteries, 65

Macrohomogeneous model
electrochemical modelling of lead/acid batteries under operating conditions of electric vehicles, 175
Microfiber glass separator
an account of the development of the first valve-regulated lead/acid cell, 153
Modelling
modelling of local conditions in flooded lead/acid batteries in photovoltaic systems, 181
Mössbauer spectroscopy
analysis of tin in lead oxide by Mössbauer spectrometry and transmission electron microscopy, 35

Negative electrodes
a study of the passivation mechanism of negative plates in lead/acid batteries, 65
Negative plates
effects of carbon in negative plates on cycle-life performance of valve-regulated lead/acid batteries, 147
Nucleation
reaction model development for the $Pb/PbSO_4$ system, 39

Open-circuit voltage
effects of cobalt in lead/acid batteries, 91
Open-circuit voltages
a predictive model of the reliabilities and the distributions of the acid concentrations, open-circuit voltages and capacities of valve-regulated lead/acid batteries during storage, 139
Operating conditions
analysis of the performance parameters of lead/acid batteries in photovoltaic systems, 197

Passivation
analysis of tin in lead oxide by Mössbauer spectrometry and transmission electron microscopy, 35

Passivation layer
effect of polarisation mode, time and potential on the properties of the passive layer on lead–tin alloys, 21
Passivation mechanism
a study of the passivation mechanism of negative plates in lead/acid batteries, 65
Passivity
the kinetic mechanism of the PbO_2 discharge of the lead/acid positive plates, 111
Photovoltaic systems
modelling of local conditions in flooded lead/acid batteries in photovoltaic systems, 181
monitoring the battery status for photovoltaic systems, 193
analysis of the performance parameters of lead/acid batteries in photovoltaic systems, 197
Polarisation mode
effect of polarisation mode, time and potential on the properties of the passive layer on lead–tin alloys, 21
Positive active mass
influence of cycling on the nature of the positive active mass of lead/acid batteries and effect of $CaSO_4$ on the behaviour of the positive plates, 51
Positive active material
structural and morphological study of damage in lead/acid batteries during cycling and floating tests, 117
Positive plate discharge
the kinetic mechanism of the PbO_2 discharge of the lead/acid positive plates, 111
Positive plates
soaking and formation of tetrabasic lead sulfate, 71
study of resistance changes related to premature capacity loss in lead battery plates, 123
Power systems
industrial batteries in the electric power system of 'Electricité de France', 203
Premature capacity loss
structural and morphological study of damage in lead/acid batteries during cycling and floating tests, 117
study of resistance changes related to premature capacity loss in lead battery plates, 123
Process simulation
simulation of the cast-on-strap process in a finite-element model, 97
Production technology
simulation of the cast-on-strap process in a finite-element model, 97

Reaction mechanisms
the kinetic mechanism of the PbO_2 discharge of the lead/acid positive plates, 111
Resistance
study of resistance changes related to premature capacity loss in lead battery plates, 123
Reticulated vitreous carbon
electrochemical behavior of lead dioxide deposited on reticulated vitreous carbon (RVC), 29

Single-pore model
electrochemical modelling of lead/acid batteries under operating conditions of electric vehicles, 175
Sizing
industrial batteries in the electric power system of 'Electricité de France', 203
Solid-state reactions
the kinetic mechanism of the PbO_2 discharge of the lead/acid positive plates, 111
Specific energy
positive plate additives, 47
Specific gravity
monitoring the battery status for photovoltaic systems, 193
State-of-charge
monitoring the battery status for photovoltaic systems, 193
Stratification
modelling of local conditions in flooded lead/acid batteries in photovoltaic systems, 181
Surface conductivity
dependence of the electric field on the specific surface conductivity of PbO_2, $3PbO \cdot PbSO_4$ and $4PbO \cdot PbSO_4$, 61
Sustainability
the lead/acid battery — a key technology for global energy management, 157

Tetrabasic lead sulfate
improvement of the formation efficiency of the tetrabasic lead sulfate for lead/acid batteries, 81
Thermal runaway
energy balance of the closed oxygen cycle and processes causing thermal runaway in valve-regulated lead/acid batteries, 131
Tin
effect of polarisation mode, time and potential on the properties of the passive layer on lead–tin alloys, 21
analysis of tin in lead oxide by Mössbauer spectrometry and transmission electron microscopy, 35
Transmission electron microscopy
analysis of tin in lead oxide by Mössbauer spectrometry and transmission electron microscopy, 35

Valve-regulated lead/acid batteries
energy balance of the closed oxygen cycle and processes causing thermal runaway in valve-regulated lead/acid batteries, 131
a predictive model of the reliabilities and the distributions of the acid concentrations, open-circuit voltages and capacities of valve-regulated lead/acid batteries during storage, 139
an account of the development of the first valve-regulated lead/acid cell, 153
